Code <https://github.com/RudraPandit0504/nirikshak>

Market access has outrun trustworthy guidance

16+ crore

demat accounts in India

70%+

of new retail accounts from
Tier-2/3 cities

9 in 10

individual F&O traders lose money
(SEBI study)

- Tips arrive as WhatsApp/Telegram forwards and YouTube videos: "guaranteed" returns, buy/sell calls, VIP groups, fake KYC alerts.
- Scammers use fake SEBI numbers, cloned broker sites and remote-access apps; victims realise only when money is gone.
- Many first-time investors are more comfortable in Hindi, have no one to ask, and can't tell education from promotion.

Sunita, 34, Kanpur: first-time investor, Hindi-first

- Opened a demat account last year; learns from YouTube and family WhatsApp groups
- Receives "tips" and "KYC alerts" daily and can't verify who is behind them
- Reads Hindi comfortably, English with effort; uses a mid-range Android phone
- Needs a quick, trustworthy answer at the moment of doubt: before she pays, clicks or invests

Also built for

Senior citizens targeted by impersonation (fake SEBI / broker calls)

Families checking a tip forwarded to a parent

Anyone who just received a suspicious message

What she needs

Is this a scam? Which exact part is dangerous?

Is this person SEBI-registered?

What should I do now, in my language?

One product, four ways to check before you trust

Check a message

Paste a forwarded WhatsApp/Telegram/SMS tip or drop a screenshot. Flags OTP requests, fake KYC, payment demands, suspicious links, impersonation.

Track A

Audit a video

Paste a YouTube link. Every guaranteed-return promise, buy/sell call, hype and hidden promotion, quoted with its timestamp.

Track E

Profile a creator

Audits a channel's recent uploads: how often they give tips, promise returns or push paid groups.

Track E

Ask in your words

Chat (typed or spoken, Hindi/English) about any audit. Answers cite the evidence; never gives investment advice.

Tracks C/E

Every name, website and registration number is checked against 6,645 entities from 5 SEBI registers. Every result comes with a plain-language summary, concrete next steps, a PDF report and a natural voice, in English or हिन्दी.

A fake Zerodha KYC alert, caught in seconds

Message checked · 4 lines · 4 Oct 2026, 8:08 pm

Forwarded message

100
High risk

High risk: impersonates Zerodha and asks for OTP and a processing fee.

The message falsely claims your Zerodha DEMAT account will be blocked due to pending KYC. It directs you to verify via a link, asks for an OTP over the phone, and demands a ₹99 processing fee.

Listen PDF report JSON New audit Delete this check

MAIN CONCERNS

Line 2 • **Pretends to be an official or a known firm**
The message uses the name Zerodha but links to zerodha-kyc-update.in, which is not their official website (kite.trade, zerodha.com). This is a common impersonation trick.

Line 3 • **Asks for OTP, PIN or remote access**
Sharing an OTP is sensitive information that should never be shared with anyone except Zerodha. This message is likely a scam.

Line 4 • **Upfront payment or fee**
Requests for upfront payments or fees are often a sign of a scam. Zerodha does not ask for such fees.

SEBI REGISTRATION

No SEBI registration as a research analyst or investment adviser was found for 'the sender'. Registration only matters for creators who give buy/sell calls or promise returns, and this message does not.

WHAT YOU SHOULD DO

- Never share an OTP, PIN or password, and never install AnyDesk or similar apps for anyone. No bank, broker or SEBI official will ever ask for them.
- Don't send any money, fee or 'tax' to a UPI ID, QR code or personal account mentioned in the message.
- Contact the company yourself through its official website or app, not through numbers or links in this message. If you shared details or money, call 1930 or report at cybercrime.gov.in immediately.

- Risk 100/100: every warning sign is tied to the exact line
- Domain check: uses Zerodha's name but links to zerodha-kyc-update.in, not their official site
- Spots the OTP request and the ₹99 fee to a UPI handle; ignores a genuine bank OTP SMS
- Gives concrete steps: don't share, don't pay, use the official app, call 1930
- Works from a screenshot too (vision OCR keeps Hindi in Devanagari)

A "100X guaranteed" crypto video, audited line by line

KatochXcrypto · 11:21 · YouTube captions (English)

3 crypto coins will make you "MILLIONAIRE" in 2024. 100X return Guaranteed!

High risk: promises guaranteed 100x returns and pushes a paid Telegram group.

The video pitches three crypto coins as potential 100X gains in 2024, urging viewers to join a paid Telegram group for daily updates. It includes price predictions and specific buy/sell calls without any risk disclaimers or SEBI registration.

[PDF report](#)
[JSON](#)
[New audit](#)
[Profile this creator](#)

MAIN CONCERNS

- Price prediction / hype**
 Predicting such high returns can mislead investors into thinking they are guaranteed.
- Specific buy/sell call**
 Explicitly recommending specific tokens can pressure investors into making hasty decisions.
- Paid / Telegram / VIP group**
 Promoting a specific Telegram community can be seen as an attempt to direct traffic or sales.

SEBI REGISTRATION

No SEBI registration as a research analyst or investment adviser was found for 'KatochXcrypto'. We checked the one name linked to this video. No risk disclaimer was found in the video or its description.

WHAT YOU SHOULD DO

- Do not trade on the buy/sell calls in this video. Only SEBI-registered research analysts or investment advisers may give them.
- No market investment can guarantee returns. Treat any promise of fixed or 'sure' profit as a red flag.

- Full transcript (YouTube captions or local Whisper, Hindi/English/Hinglish)
- Findings quote the creator verbatim with a timestamp you can click
- Each finding shows severity, confidence and whether AI or keywords found it: uncertainty is visible, never a bare true/false
- Separates promotion (paid groups, referral links) from education

Real checks against SEBI's public registers

- Local mirror of 5 SEBI registers: research analysts, investment advisers, portfolio managers, brokers, mutual funds (6,645 entities)
- Checks every registration number (typos too), the channel name, presenters and guest experts found by AI, and the creator's own website
- Clear verdicts: registered adviser • registered only as a broker (not allowed to give tips) • guest expert registered • not registered
- Shows exactly what was checked, so "not found" is evidence, not a failure

SEBI REGISTRATION CHECK

 **No SEBI RA/IA registration found**

The channel name does not match any SEBI-registered Research Analyst or Investment Adviser. Only registered entities may give personalised investment advice or buy/sell calls.

WHAT WE CHECKED

 **KatochXcrypto** · channel name
not in SEBI register

 **Platinum Telegram** · company
not in SEBI register

 **Trading Academy** · company
not in SEBI register

Risk disclaimer

Verify yourself on SEBI's website 

 **Not found**

Grounded answers, and a firm line on advice

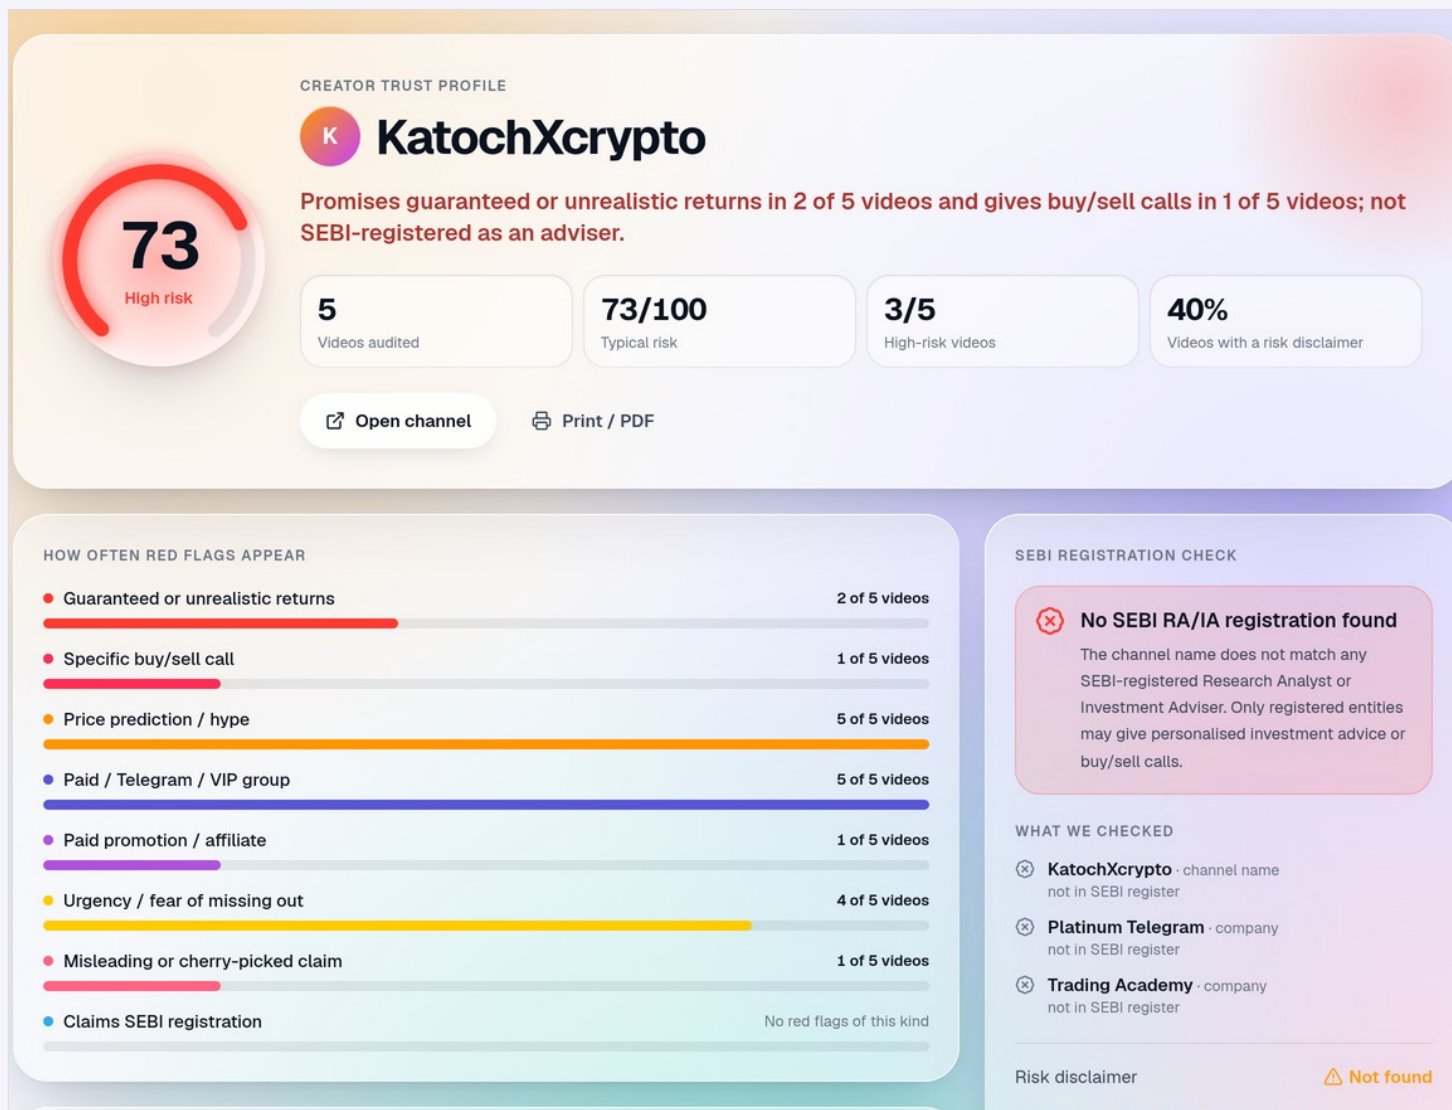

- Questions in English or Hindi, typed or spoken (local Whisper)
- Answers cite real transcript lines; made-up citations are dropped
- "Should I buy?" / "Will it double?" are refused and redirected to the facts and registration status
- Concept questions ("what is a stop-loss?") get labelled general explanations

Built for Hindi speakers and low-end phones

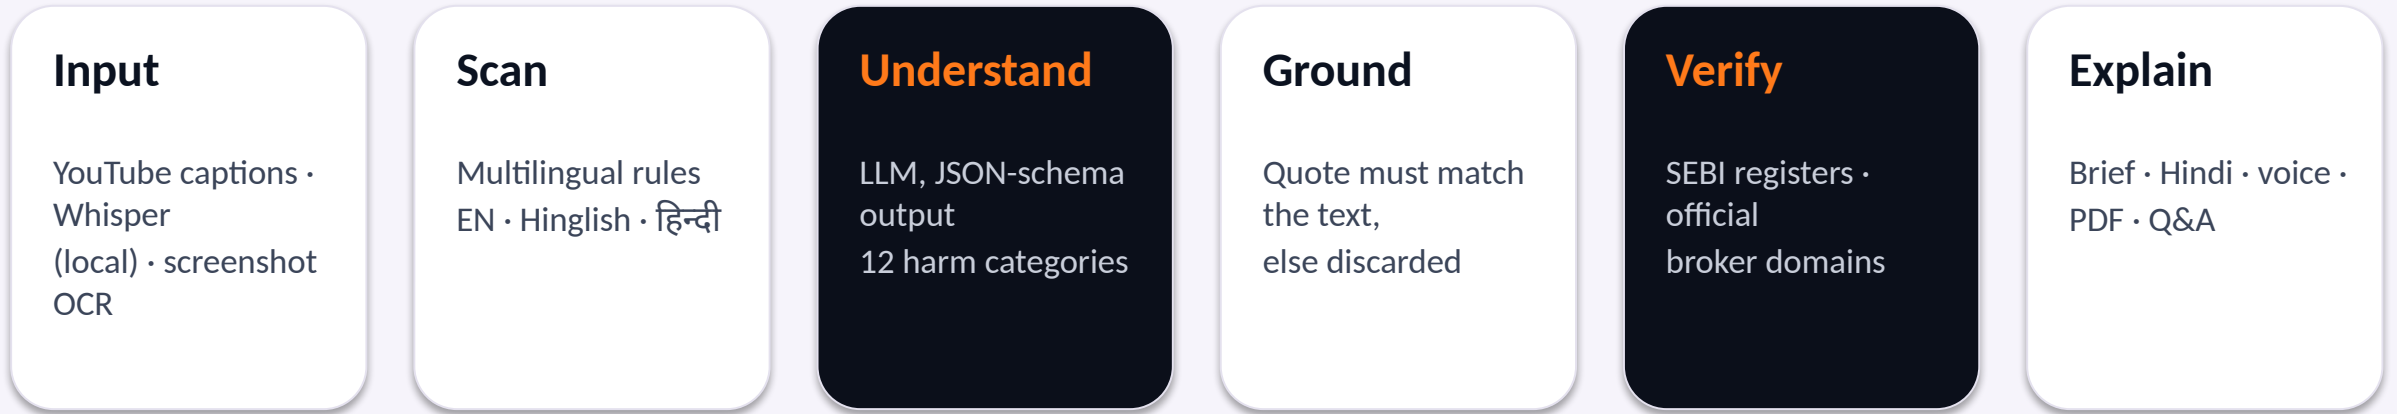

- Full Hindi UI, explanations, summaries and PDF, written in everyday Hindi (style guide + glossary)
- Natural voice reads the summary aloud (Kokoro TTS, 4.1/5 naturalness in Hindi vs 1.4 for the browser voice)
- Works on any phone browser: responsive layout, light effects; the AI runs on a server

One video can be an outlier; the pattern is the warning

- Audits a channel's latest uploads (re-using earlier audits)
- Example: high risk overall; all 5 recent videos push a paid Telegram group, 2 promise guaranteed returns; not registered
- Contrast: a SEBI-registered research analyst is verified and scores low (0/100) across recent videos
- Helps users decide whom to follow, not what to buy

AI used where it matters, guarded by checks

- Runs fully local on a 6 GB laptop GPU: Qwen 2.5 7B (analysis) + Gemma 3 4B (Hindi, vision) via Ollama, faster-whisper, Kokoro TTS. No data leaves the device.
- Hosted demo on AWS (EC2, Mumbai): same code, AI via Amazon Bedrock with Groq/Gemini fallback, server-side keys, per-visitor limits.
- Stack: Python · FastAPI · SQLite · React + TypeScript + Tailwind · Docker. 31 unit tests; labelled eval sets.

Non-commercial, private, honest about uncertainty

Guardrails

No tips, predictions or buy/sell/hold views
Advice questions refused
No brokers promoted, no monetisation

Privacy

Full version runs on the user's device
No SMS/OTP harvesting; nothing stored remotely
Messages can be checked without saving

Uncertainty

Confidence on every finding
Verbatim quotes to self-check
"Possible match: verify the number"

Held-out test sets (never used for tuning): video claims F1 0.89 vs 0.56 for keyword rules alone, 0 false alarms on clean videos; forwarded-message scams F1 0.96, 0 false alarms on clean messages (bank OTP SMS, news, family chats).

Calibrated scoring: registered analysts and educational videos score low (0-14); scams and guaranteed-return pitches score high. Test sets are published with the code.

Infrastructure any institution can run

- Open source; runs on one consumer GPU with zero per-check cost, or on a hosted model API
- An exchange, depository, investor-education fund or NGO can host it for millions; users only need a phone browser
- Rules, registers and languages are data: add new scam patterns or regional languages without retraining

Next steps
